

TASK 6: Host a Static Website with GitHub Pages

Objective: Deploy a simple HTML website using GitHub Pages.

Tools: GitHub Pages

Deliverables: Live website link and GitHub repo

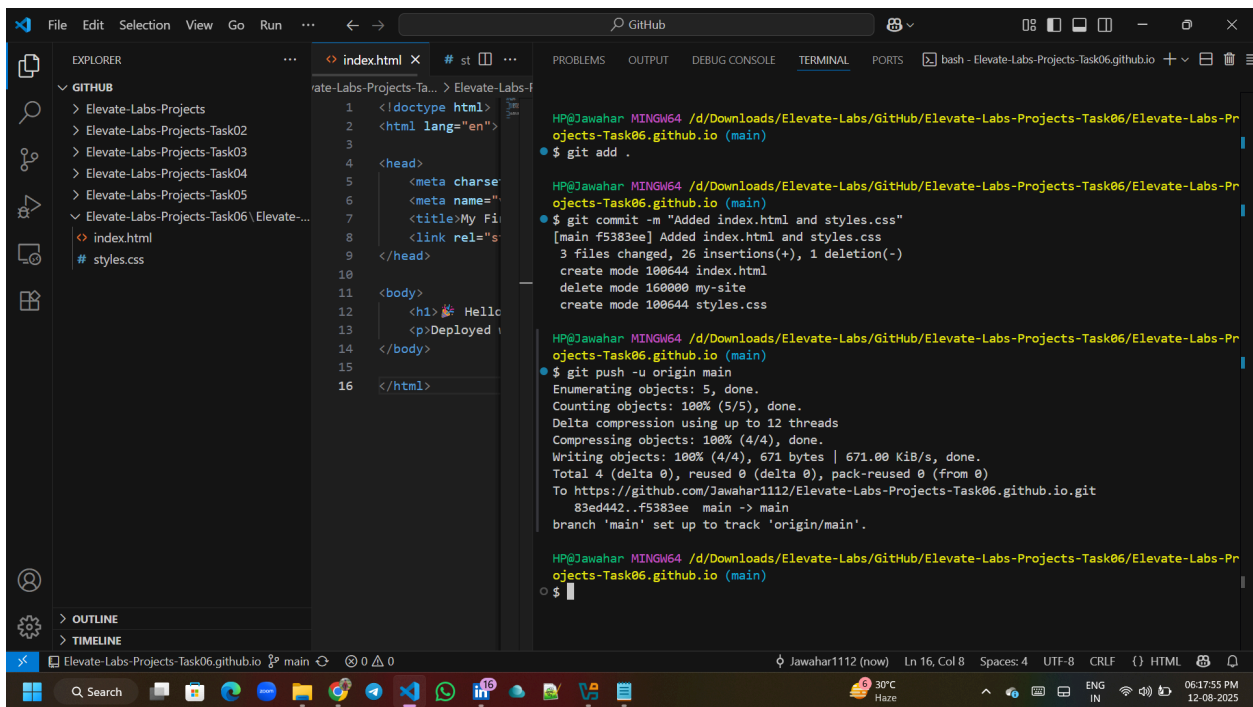

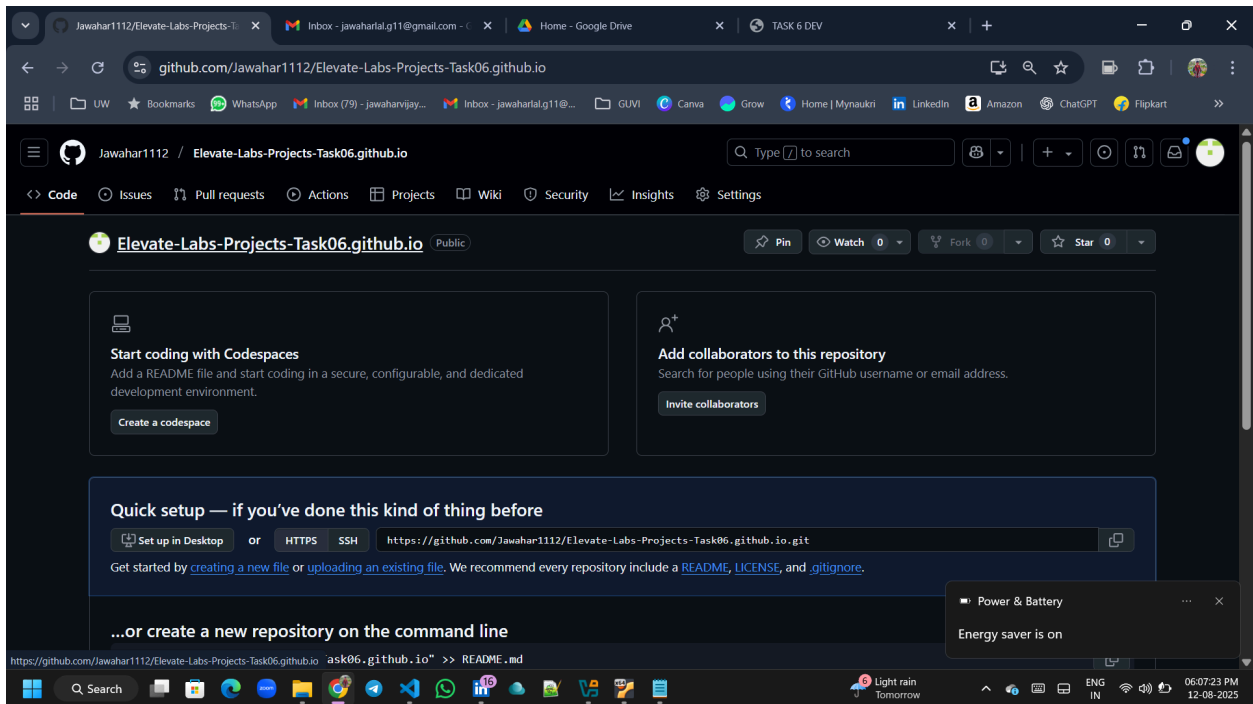

Mini Guide:

1. Create an index.html file.
2. Push it to a new GitHub repo.
3. Go to repo → Settings → Pages → enable GitHub Pages.
4. Select main branch and root folder.
5. Access live website from the link GitHub gives.
6. Try customizing with CSS.

README

Elevate Labs - Projects Task 06 This is my beginner project for Elevate Labs Task 06, where I created a simple static website using HTML and CSS, and deployed it with GitHub Pages.

Technologies Used HTML5

About

This repository contains my first simple website built with HTML and CSS, deployed using GitHub Pages. I created an index.html file, customized it with basic styling, and hosted it directly from this repo. The site goes live automatically whenever I push new updates to the main branch.
